Although technology has advantages and disadvantages for youth in society, we cannot ignore them.

Modern society is highly influenced by technology, whether it is households, businesses, or education.

Modern technology has many advantages, but it also has many disadvantages. Disadvantages are most prevalent among youth.

The key to a country's success is its youth. Thus, we must introduce it to our youth and make sure they understand its advantages and disadvantages.

Advantages and Disadvantages of Modern Technology on Youth in Society:

As a young person in society, I am focusing on and highlighting the advantages and disadvantages of technology.

The youth of today are completely off course when we look around.

It is obvious that there is an easier, faster, and simpler path to follow than the right one, which takes more time and effort. As a result, we are more likely to make mistakes when we are young.

It is undeniable that technology has greatly improved our lives. Almost all difficult tasks can be accomplished with the help of modern technology.

However, youth need guidance when it comes to handling everything.

Our youth are being corrupted and spoiled by modern technology, which I am raising as a serious issue.

The root of this problem lies in our youth's tendency to be easily distracted, so we must address it from the beginning.

In spite of all these distractions, technology has countless and endless advantages for our youth, especially. Our lives are made easier and more enjoyable by the technology we use. Using modern technology in everyday life has pros and cons.

Advantages and Disadvantages of Modern Technology on Youth

Pros	Cons
------	------

- Improved communication
- Improved social networking
- Information is easier to access
- Electricity generated by solar panels
- Through technology, making disabled people more able
- Technology based on artificial intelligence
- Transportation technology
- The technology used in agriculture
- Technology saves us valuable time
- Using modern technology in banking

- Crimes are on the rise
- Time is wasted by excessive mobile use
- Technology addiction
- Students are distracted by technology while studying and working
- Creativity is reduced by technology
- People are isolated from each other by technology
- The environment is harmed by technology
- Technology causes a lack of interest in studying

---	---

Firstly, I will tell my readers about the advantages of modern technology that will help our youth succeed.

Advantages of Modern Technology for Youth:

There are innumerable and unquantifiable benefits to technology for youth. Most of their tasks and responsibilities can be fulfilled with the help of technology.

This is essentially what our youth need today.

Positive Effects of Technology on Youth:

1. COMMUNICATION GETS IMPROVED:

Through technology, our communication has greatly improved, and this has been both a positive and a beneficial development.

Using new technology can enhance our youth's communication skills, which is one of the greatest advantages.

Communication has had a positive impact on our society and on our youth in many ways.

We teach our youth how to easily reach out and connect with family and friends.

Compared to decades past, our youth do not have to go to some special place just to send a message and connect to the internet.

A message can be sent anywhere in the world with today's signals. As well as being easier and more reliable, interactions have also improved.

It is through communication that we learn.

2. SOCIAL NETWORKING GET IMPROVED:

Through this process, our society and young people gain the most benefits if they can build their network and follow their path to success.

With the help of technology, our youth can expand their social networks.

It is now possible for young people to connect with people who have similar interests and grow their social networks using technological tools.

They can compile a wide range of information using social networks because of the technology they use.

The platform provides young people with access to information that will help them succeed in both academics and the workplace.

As your social network grows, you will become more aware of the world.

3. ACCESS TO INFORMATION GETS EASIER:

Thanks to technology, our youth now have access to the latest information about the topics they want and need.

Information about their usage can be collected simply by searching on Google. There can be multiple results and they can be in a variety of formats.

In addition to images, articles, videos, and slideshows, there is a wide variety of formats available.

Access to the most recent information is easy thanks to technology. There is a need for information in almost every sector.

For simple tasks, such as preparing a presentation for a client or completing an assignment, or for preparing a business plan, technology is necessary.

The importance of technology cannot be overstated, regardless of where you are in your career.

4. SOLAR ELECTRICAL POWER TECHNOLOGY

Solar power is the process of converting the sun's heat and light into electrical energy.

Solar power is today's newest invention. With the help of various devices and machines, solar energy can be converted into electrical energy.

There are no fossil fuels used in new solar power technologies and they are pollution-free.

The machine does not produce pollution like other technological machines (for example, a generator).

One of the greatest benefits of solar energy is that it is not harmful to the environment. There are a variety of applications for solar energy technology today.

In the future, solar power technology will completely drive modern technology.

It provides energy for motor cars, streetlights, hand-held torches, and buildings, homes, factories, among others.

5. MAKING DISABLED PEOPLE MORE ABLE THROUGH TECHNOLOGY

It is no longer necessary for disabled people to be disabled today. Several machines and devices are available to them for performing certain tasks.

We are able to do almost anything with the technology of today. People with disabilities of their hands and feet have been able to use artificial hands and feet in recent years.

Artificial hands and feet enable them to use their hands correctly and walk correctly.

People with disabilities can benefit from a variety of devices that assist them in different ways.

6. Artificial Intelligence Technology

The basis for future technology is artificial intelligence.

Technology is powering everything in the world today, which is referred to as artificial intelligence.

Every type of work will be impacted by technology.

Artificial intelligence scientists create a brain that is human-like and capable of doing all work independently as well as evaluating which decisions to make.

Artificial intelligence will be able to determine what to do and how to do it, so humans won't have to.

7. TRANSPORTATION TECHNOLOGY

The role of technology in transportation cannot be overstated. The use of technology has made transportation much easier in the past few decades.

There are many types of transportation technology, from bicycles to automobiles to airplanes. From one place to another, it is a means of transportation.

Traveling without these types of technologies is impossible.

8. TECHNOLOGY USED IN AGRICULTURE

The role of technology in agriculture cannot be overstated.

Recent years have seen a significant improvement in the ease of farming. Tractors, harvesters, and planters are among the technological machines used in the farming process.

As a result of technology, former agricultural workers are changing their careers. Formerly, the process of farming was very difficult. Now, technology has made it much easier for them.

As a result of the technology, they are able to complete farms more quickly.

9. TECHNOLOGY SAVES US VALUABLE TIME

Time is one of the main goals of modern society, which is why technology is designed to save us time.

Our scientists are constantly working on new technological innovations to facilitate efficiency and save time.

Technology and machines that are available today save us a lot of time.

Before the invention of transportation technology, it was very difficult to transport people from one place to another because it took a long time.

The use of technology, however, has made it easier for people to reach out to each other.

If you want to find the best route to your destination, your smartphone's navigation app can help.

A variety of technological devices and machines facilitate the efficiency of our work.

10. THE USE OF MODERN TECHNOLOGY IN BANKING

The use of technology also improves banking. In today's world, almost every bank uses technology.

The purpose of technology is to make people's lives easier, and thanks to technology, banking has become very easy.

Online transactions and ATM machines make it easy for people to conduct any type of transaction.

A customer no longer needs to go to the bank and wait in line to conduct any kind of transaction; they can simply conduct it online or from an ATM machine near them.

A debit card or a credit card is also a form of technology.

It is not necessary to carry cash in the pockets of people who use these cards. In addition to being used for buying, these cards can also be used to sell.

11. TECHNOLOGY'S ROLE IN EDUCATION

There is no field in which technology is not used, as I previously stated.

The use of technology in education has a lot of advantages for both students and teachers.

When it comes to studying and teaching, technology is a great benefit to students and teachers alike.

Electronic devices, gadgets, and software are beneficial to many students.

The use of multimedia projectors is ubiquitous in today's education systems. It makes teaching easier and more enjoyable for teachers.

The use of multimedia projectors can help students better understand the information presented to them.

For students, learning becomes more interesting and motivating.

12. BENEFITS OF TECHNOLOGY FOR THE HEALTH SECTOR

Technology is used in hospitals in the health sector.

Technology is used in hospitals to monitor patients' health.

Doctors must be able to access accurate and timely information about the diseases of their patients at any time. The result was that doctors made fewer errors when analyzing patients' diseases as a result.

Most hospitals today use modern technology in the modern world.

13. ENTERTAINMENT TECHNOLOGY

Technology plays an important role in the entertainment industry as well. A wide variety of modern technological devices are available for entertainment.

- Mobile phones
- Computers
- Play stations (video game consoles)
- Video games
- VR devices

Generally, these devices are used for entertainment. In their free time, people use these kinds of devices to entertain themselves.

14. COST DEFICIENCY IS A RESULT OF TECHNOLOGY

One of the objectives of modern technology is to keep costs as low as possible. As a result of technology, people are able to do things more easily and at a lower cost.

The cost of technological devices, machinery, and gadgets has decreased dramatically over the past few decades.

People are benefitting from technology in increasingly diverse ways, resulting in cost savings.

With fewer workers, machines, and more efficiency, we can now accomplish a variety of jobs with fewer workers and machines in less time.

15. TECHNOLOGY USED TO PURCHASE AND SELL

Purchases and sales have become much easier thanks to modern technology. Buying and selling products can be done easily over the internet.

Through various websites and software (such as Amazon, Alibaba, etc.), products can be sold and purchased online.

When making an e-commerce purchase, people simply open an e-commerce website, select the product they wish to buy, enter their credit card number or the type of delivery they desire, and click "buy now".

The product is delivered within a few days. They do not have to struggle for them.

They can also order food on their own. Many shops offer online shopping to their customers, allowing them to order and receive their items.

Their website or application allows them to order food online and have it delivered to their homes within minutes.

16. LIVING CONDITIONS AND HOUSING IMPROVED DUE TO TECHNOLOGY

Technology plays a very important role in human lifestyles. In addition to providing people with new ideas to improve their lives, it is continuously developing and improving.

In the modern world, life is very different than it was 20 years ago. When they see the world of today's technologically advanced people, they will be amazed by the new inventions.

Technology always brings new ideas and lifestyles to people. People invent new inventions so that their lives can be improved.

DISADVANTAGES OF TECHNOLOGY FOR YOUTH:

As for its disadvantages, our youth have been exposed to too many harmful and dangerous aspects of it.

The purpose of this article is to discuss the disadvantages of technology for society and human life.

1. CRIMES ARE ON THE RISE:

The number of attempts to commit crimes is increasing every day, which negatively affects our youth.

In order to carry out their illegal activities, they use technology.

Theft and hacking of data are examples of such crimes. Both their personality and future education are affected.

It is impossible for a young person to stop engaging in illegal activities once they become involved. As a result, our elders and parents need to monitor carefully how their children use technology.

2. EXCESSIVE USE OF MOBILE IS A WASTE OF TIME:

On the one hand, mobile phones have many benefits, but on the other hand, they also have many risks.

It is considered the device that wastes the most time. Our youth do not study and work hard for the future because they spend so much time on their phones.

In addition to wasting time on chatting apps, they are also taking time away from their families by spending more time on their phones than they do with them.

Therefore, I believe that mobile phones are the most distracting devices for our youth.

3. ADDICTION TO TECHNOLOGY:

Our youth are becoming addicted to technology due to their misuse of it.

As a result of this addiction, they experience physical and psychological changes. We must therefore allow our youth to access technology while keeping an eye on them at all times.

A situation should never arise where they are left free to become addicted and make themselves and their families miserable.

4. Technology distracts students from studying and working

There are many distractions posed by modern gadgets and technological devices today.

Smartphones, video games, and television are the most commonly used technology devices.

The majority of people use these devices instead of working or studying, which results in a great deal of wasted time.

Unproductive activities like these waste valuable time that could be spent on achieving goals and achieving ambitions that require effort.

Don't stop using it, I'm not saying. It can only be used at a certain time and not all the time.

It is important to set a schedule for ourselves and adhere to it. The time we spend at work is our work time, and the time we spend studying is our study time, and we shouldn't use them all of the time, but we can use them at certain times.

5. Technology reduces people's creativity

Because modern technology reduces creativity, it kills it.

Today's technology is the most distracting thing, as I mentioned earlier. Using technology all the time reduces creativity because it keeps people busy all the time.

Seeing something unique, new, and interesting in every situation, and then putting it into practice, is what creativity is all about. Creative ideas come from deep thinking, which is why they are so great.

However, since they use only modern technological devices, their minds are occupied with using technology.

The result is a loss of creativity.

6. Technology isolates people from each other

People become socially isolated as a result of technological advancements.

Most people watch television and use their mobile phones regularly, so they have little time to do anything else.

As a result of using technology extensively, they are addicted to it.

In addition to not wanting to interact with anyone outside, they also do not want to do anything else.

As a result, they isolate themselves from society.

7. Technology is harmful to the environment

Modern technology affects our environment as well.

Humans and other living things in the environment can both be negatively affected by pollution.

We are specifically discussing how modern technology has a negative impact on our environment, causing problems in our surrounding environment.

Our environment is being damaged by modern technology in the following ways.

a). Technologically induced air pollution

We breathe polluted air from factories and vehicles, causing many diseases (such as asthma) in humans and other animals.

Many animals and humans suffer from oxygen shortages and other diseases caused by air pollution.

b). Noise pollution caused by technology

The technology industry is a major source of sound pollution. A heavy machine, a factory, a vehicle, and an airplane fall under this category. Living things are severely harmed by the chemical.

c). Water pollution caused by technology

Water pollution from factory wastewater contributes to the pollution of rivers and lakes of gallons. Because they contaminate the water, these chemicals are extremely harmful to living things.

By doing so, hazardous diseases are created and deaths are caused.

8. Lack of interest in studying is caused by technology

Students should have goals and ambitions they want to achieve and achieve through their studies.

When people become addicted to technology and rely on it extensively, they lose interest in their studies. Computers, mobile phones, tablets, and play stations are always their favorite devices.

We lose sight of our goals and ambitions. A large number of students suffer from this problem.

Technology can also negatively affect students' education in the following ways:

- There is a waste of students' precious time
- Technology can distract us from our studies, goals, and ambitions.
- The purchase of unnecessary technological gadgets by students wastes money.
- Creativity is lost.

9. People experience health problems because of technology

We are also affected by technology in terms of our health. People who use technology extensively are at risk of developing a variety of diseases.

Today, almost everyone uses a mobile phone, which is also harmful to their health.

Human health can be negatively affected by technology in the following ways.

1. Eyesight damages
2. Obesity rates increase
3. The disease of brain cancer
4. Damages hearing
5. Problems with asthma
6. Cancer of the skin

10. Technology results in waste of money

The trend of wasting money on technology has become prevalent. For many people, technology is a big waste of money.

There are two ways in which people waste their money on technology. In order to purchase technology, people have to pay for it.

Buying technological devices, gadgets, and machines is expensive. Besides paying a lot for it, people also have to pay a lot for its maintenance.

Second, people tend to spend a lot of money on unnecessary technology devices, such as smartphones and tablets.

People's addiction to technology is the reason for this. They have always prioritized buying the latest, most advanced, and most expensive technology.

11. Technology Dependence of People

Technology also has a negative impact on people in the form of dependency.

Compared to 20 years ago, the world that exists today is quite different from the one that existed then.

Previously, people worked hard on their own every day, which is why they are so strong and creative today.

Technology has become a necessity for everyone now. In the absence of technological machines and gadgets, we will not be able to function properly.

They lose both their creativity and health as a result of being dependent on technology.

Excessive use of technology results in lazy workers, while technology also decreases their value.

12. Technology Security Issues

Security concerns are also associated with the use of technology.

Technology is becoming more and more prevalent in society. Every individual wants to automate everything through technology.

The use of advanced technologies for security is common in homes, offices, and factories.

Sometimes technology fails and does not function properly, and recovery takes a long time.

There is a great deal of risk involved. It is possible to lose money, privacy, and even one's life.

Therefore, this summarizes the disadvantages of modern technology for society's youth.

CONCLUSION:

The use of technology can generally be positive and beneficial. The danger comes from excessive use, as with anything. Teenagers are particularly at risk.

Hopefully, now you have gained an understanding of the **advantages and disadvantages of technology for youth in society**.

Feel free to share your thoughts about technology's advantages and disadvantages in society in the comments. You can expect a response within a few days.

Read and learn as much as you can. Don't forget to share it with your friends and family as well.
